TECHNICAL SKILLS

PHP	AJAX	PayPal payment gateway
CodeIgniter Framework	Bootstrap	Vitro API
RESTful APIs	Google Maps API	TailwindCSS
MySQL	SEO	ReactJS
HTML	HeidiSQL	GoDaddy
CSS	Filezilla	Laravel (practical knowledge)
JavaScript	WinSCP	PHPUnit (practical knowledge)
jQuery	Visual studio code	Github (practical knowledge)
JSON	Chrome dev tools	

SOFT SKILLS

Teamwork	Critical thinking
Attention to detail	Time management
Stress management	Adaptability
Handling criticism	Verbal and written communications

EXPERIENCE

Software Engineer III
Pointwest Innovations Corporation
August 2019 - Current   *Quezon City*

- Attend client meetings to gather input and output requirements of the project.
- Discuss and create the project development timeline with the client.
- Develop front-end of the website using the web technologies such as CodeIgniter framework, PHP, HTML, CSS, Bootstrap, TailwindCSS, JavaScript, jQuery, AJAX, Google Maps API and ReactJS.
- Develop back-end of the website using the web technologies such as CodeIgniter framework, PHP, RESTful APIs and MySQL.
- Develop website using tools such as Visual studio code, HeidiSQL, WinSCP, Postman and Chrome Dev tools. These tools are used for coding; viewing and manipulating of database; manipulating of development files; testing of APIs; and testing of website performance.

- Create MySQL queries to manipulate data that will use in different task.
- Integrate PayPal payment gateway into the website to use to pay bills.
- Integrate Google Maps API into the website to use in branch locators of some pages.
- Report the development status to the client.
- Test, debug and fix the errors of the websites before deploying it to test environment.
- Develop reusable functions based on the given requirements using PHP.
- Create the deployment guides and deployment files for production deployment.
- Assist the client in production deployment.
- Deploy other project from local to production using GoDaddy cPanel.

Key Projects: Work with the client team to develop and maintain websites. Websites displays branch locator, product forms, inquiries, products, payments, faqs, events, articles and other things for marketing purposes.

Applications Engineer
Rendition Digital Inc
May 2017 - March 2019   *Makati*
- Schedule a client meeting to discuss the requirements, estimate a task timeline and the flow of the application before the development.
- Develop the application based on the application workflow using JavaScript and Vitro API used by the client.
- Propose technical solutions for the application based on the encountered issues.
- Create a technical documentation and include the encountered issues and its solution.
- Report the development status or progress to the superiors and the client.
- Perform a peer code review based on the workflow of the application and return the result of the test to the owner of the application.

Key Projects: Work with a team to develop form applications to be used in medical institutions with a goal to become paperless.

Web Developer
Future IT Services
April 2015 - February 2017   *Pasig*
- Attend client meetings to gather input and output requirements of the project.
- Develop front-end of the website using the web technologies such as CodeIgniter Framework, PHP, HTML, CSS, Bootstrap, JavaScript, jQuery and AJAX.
- Develop the back-end of the website using the web technologies such as CodeIgniter Framework, PHP, RESTful APIs and MySQL.
- Develop website using tools such as Visual studio code, HeidiSQL and Chrome Dev tools. These tools are used for coding; viewing and manipulating of database; and testing of website performance.
- Test, debug, and fix the errors of the web application before deploying it to test environment.
- Ensure the operation of the web application.
- Support the needs of the clients or the user of the web application.

Key Projects: Work with a team to develop a project tracking system to use in a company for tracking of projects, tasks, role, employees, time recording tally of the employees and to generate reports.

Web Developer
Asiatype Incorporated

July 2014 - April 2015   *San Juan*

- Attend meetings to gather input and output requirements of the project with the development team.
- Develop front-end of the website using the web technologies such as CodeIgniter Framework, PHP, HTML, CSS, Bootstrap, JavaScript, jQuery and AJAX.
- Develop the back-end of the website using the web technologies such as CodeIgniter Framework, PHP, RESTful APIs and MySQL.
- Develop website using tools such as Visual studio code, HeidiSQL and Chrome Dev tools. These tools are used for coding; viewing and manipulating of database; and testing of website performance.
- Test, debug, and fix the errors of the web application before deploying it to test environment.
- Ensure the operation of the web application.
- Support the needs of the users of the web application.

Key Projects: Work with a team to develop a project tracking system to use by the company employees for tracking of projects, tasks, role, employees, time recording tally of the employees and to generate reports.

Web Developer
Business Profiles Inc

August 2012 - July 2014   *Makati*

- Attend meetings to gather input and output requirements of the project with the development team and manager.
- Develop front-end of the website using the web technologies such as PHP, HTML, CSS, JavaScript, jQuery, AJAX and Google Maps API.
- Develop the back-end of the website using the web technologies such as PHP, RESTful APIs and MySQL.
- Develop website using tools such as Visual studio code, HeidiSQL and Chrome Dev tools. These tools are used for coding; viewing and manipulating of database; and testing of website performance.
- Integrate Google Maps API into the website to pin the news or incidents so that it will be easier for the clients or readers to see where the incidents happen.
- Test, debug, and fix the errors of the web application before deploying it to test environment.
- Deploy the codes from local to production using BlueHost cPanel.
- Ensure the operation of the websites.
- Support the needs of the users or researchers of the websites.

Key Projects: Work with a team to develop websites that provide incident information or relevant topics for partners and readers.

EDUCATION

Bachelor of Science in Computer Science   **May 2012**
Polytechnic University of the Philippines
